

HOW FACEFILE® WORKS

1. Take a picture and send to your FaceFile Account.

Use your cell phone to take a picture of new people or suspicious behavior. Send the image with your mobile phone to your private FaceFile account.

2. Securely store picture and alert friends and family.

Once FaceFile receives your image, FaceFile securely stores, date/time stamps your image and instantly alerts your friends and family that you have updated your account

3. Your network of friends and family help keep you safe.

Friends and family you have chosen will receive a safety alert via e-mail or text message and are encouraged to check in on you. If necessary, they may contact the police.
